

How To Turn On Notifications For DMSS App

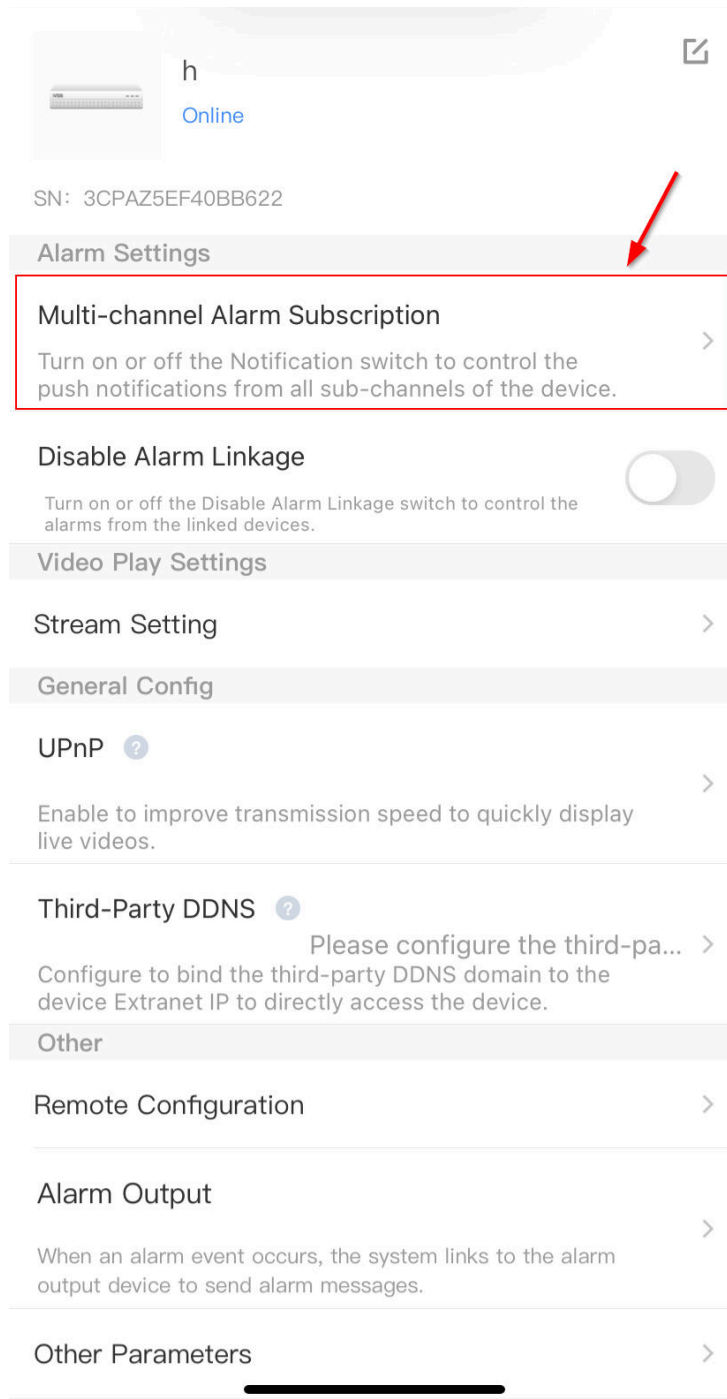

1. Click on the **3 Dots** located next to your device's play button.

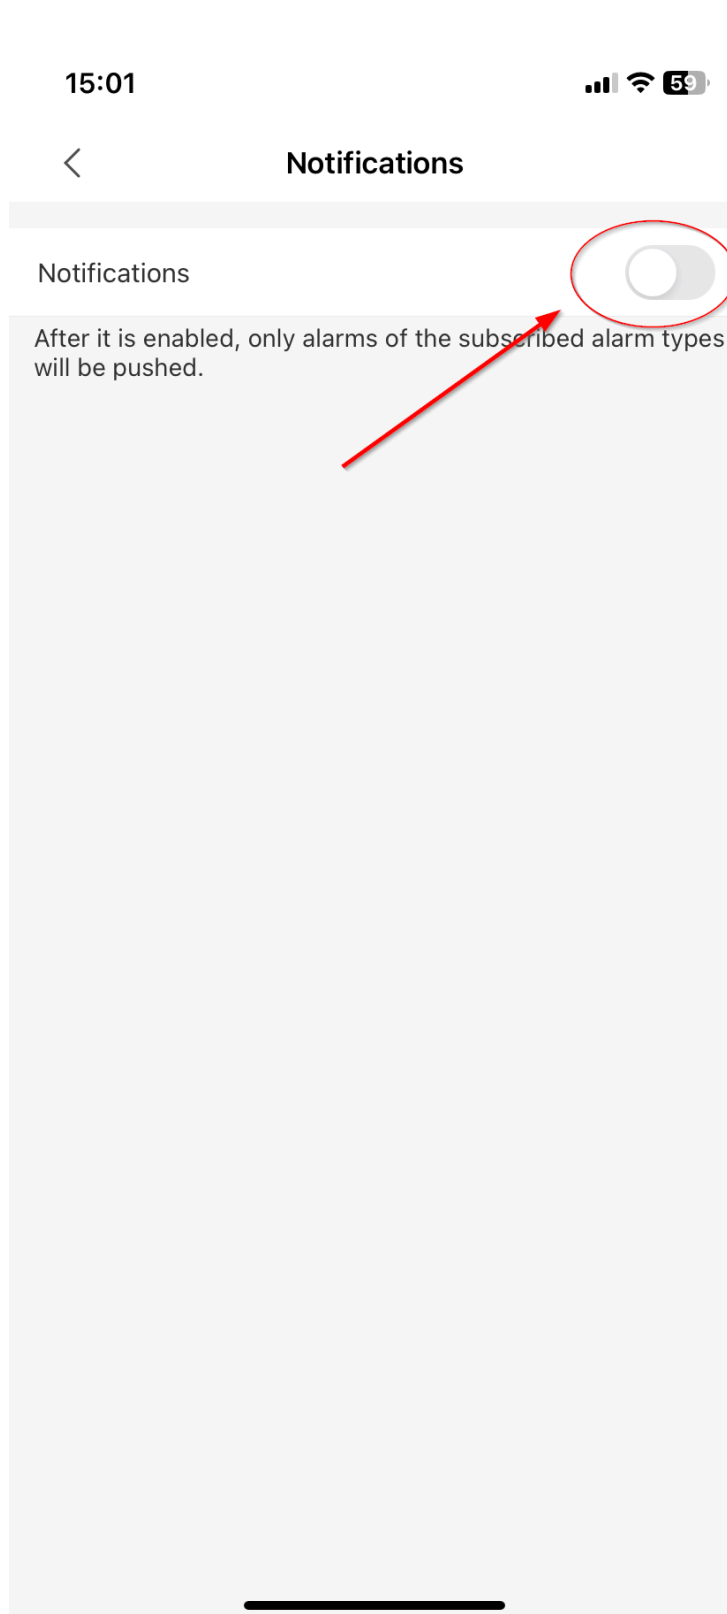

2. From there, press on **Device Details**.

3. Next, press the **Multi Alarm Subscription** tab.

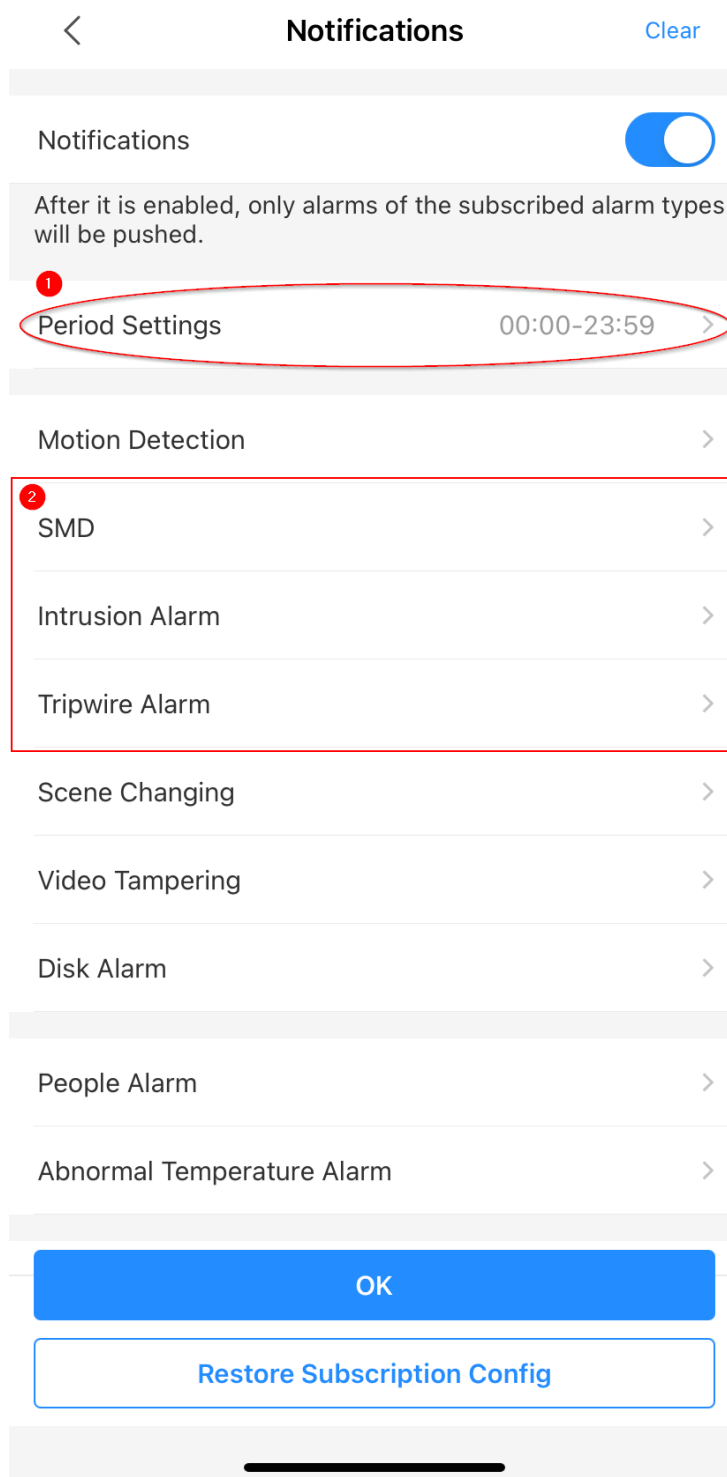

4. Now you should see a screen like the one below. If the circled button next to Notifications is grey like the one in the image below, press on the toggle switch and it will turn blue, showing that the notifications are now enabled.

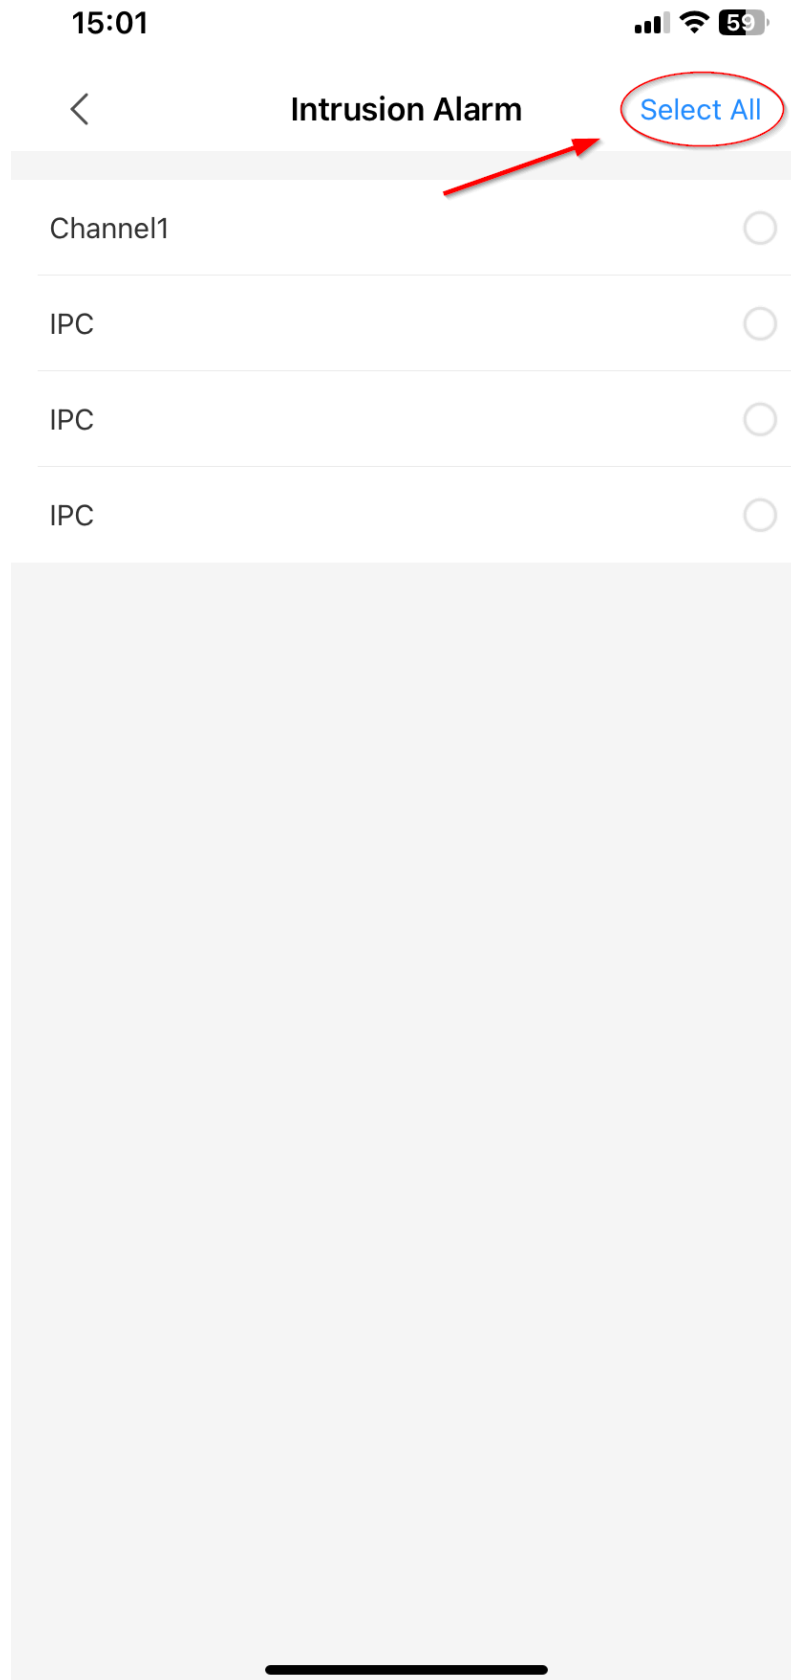

5. Now that notifications are turned on, you can set the times that you would like to be notified of an event (shown in the circle), just press on the times and you can set them using the time slider that appear, for residential properties, it is recommended to keep the default time settings.

Typically SMS will use Intrusion Alarms or Tripwire Alarms. If you are unsure, you can turn both of these on, this way you will receive whatever notifications have been set on your recorder. You can also turn on SMD (Smart Motion Detection), keep in mind that the more notification types you have turned on, the more notifications you will receive on your mobile device.

- When you select Intrusion or Tripwire Alarms, you will be presented with the menu shown below. Just press select all and it will add any cameras that you have to your notification menu. If you have only 1 or 2 cameras that you want notifications on, instead of pressing select all, just press the circle next to the camera you want to turn the notifications on for. Once the cameras are selected, press the back arrow and you can press OK on the next screen.

7. Now that you have turned on the notifications on the DMSS app, it is recommended to do a walk test past your cameras while using your mobile device. This way, you will be able to check if notifications are coming to your mobile device. Note the name of the notification will be shown, showing you which camera has sent the notification and which zone or trip line has been triggered. Congratulations on configuring the notification settings for your device. If after following this guide you are facing problems with the notifications, please contact the office for further assistance or to book a technician if required.
